03

Channel

The cursor can only perform one traversal, but sometimes we need to compute multiple data at the same time, so we need to press the data into the channel to reduce the number of traversals.

Example: In the lending business, 2200-01-01 is defined as overdue, with the number of overdue times/total times as the score, calculate the score of user and listing respectively.

	A	B
1	<code>=file("E:/txt/user_repay_logs.csv").cursor@tc()</code>	
2	cursor A1	<code>=A2.groups(user_id;count(repay_date==date("2200-01-01"))/count(~):user_score)</code>
3	cursor	<code>=A3.groups(listing_id;count(repay_date==date("2200-01-01"))/count(~):listing_score)</code>
...	...	
n	cursor	Can define other channels

A2~A3 results:

Index	user_id	user_score
1	1	0.0
2	2	0.0
3	3	0.05

Index	listing_id	listing_score
242110	242110	0.0
242111	242111	0.33333333333333...
242112	242112	0.0

Calculating Median under big data conditions.

	A	B	
1	=file("E:/txt/CD5-0201FIC10202_2017.csv").cursor@tc()		/Create cursor
3	cursor A1	=A2.sortx(Value)	/Sort according to Value in Channel
4	cursor	=A3.total(count(~))	/Count the total number in another channel
5	=A2.skip((A3-1)\2)		/Skip the first half from the cursor after sorting
6	=A2.fetch@x(2-A3%2).avg(Value)		/Fetch the median

04

Ordered cursors

Calculate the growth rate of users' online time per month in 2018 (data in UID order)

Ordered cursors

	A	B	C
1	=file("E:/txt/UseLogs.txt").cursor@t()		
2	for A1;UID	=A2.groups(UID,month(LOGIN):m_login;sum(SECOND):total_time)	
3		=to(12)\B2.(m_login)	
4		for B3	> B2.insert(B4,A2.UID,B4,0)
5		=@ B2.derive(if(m_login==1 total_time[-1]==0,null,total_time/total_time[-1]-1):raise_rate)	

Loop the UID ordered cursor, take out the same user each time, and calculate it. Set total_time to 0 if the user does not log in for a month. If it is the first month or the user didn't log in for the previous month, the growth rate is null.

B5 result:

Index	UID	m_login	total_time	raise_rate
1	10000001	1	1312198	(null)
2	10000001	2	984155	-0.24999504647926607
3	10000001	3	1241612	0.2616020850374179
4	10000001	4	1469796	0.18378044026636342
5	10000001	5	1551339	0.055479127715682974
6	10000001	6	1015243	-0.3455698593279741
7	10000001	7	1269041	0.2499874414302783
8	10000001	8	931809	-0.26573767120211245

Mail message is as follows: Each mail begins with RECIPIENT, which is divided into three parts: recipient, sender and content. Please organize the mail into structured data.

RECIPIENT:730284595@xx.xx

SENDADDRESS:106383734@xx.xx

CONTENT: Harry Potter and the Sorcerer's Stone

CHAPTER ONE

THE BOY WHO LIVED

Mr. and Mrs. Dursley, of number four, Privet Drive, were proud to say that they were perfectly normal, thank you very much. They were the last people you'd expect to be involved in anything strange or mysterious, because they just didn't hold with such nonsense.

Mr. Dursley was the director of a firm called Grunnings, which made drills. He was a big, beefy man with hardly any neck, although he did have a very large mustache. Mrs. Dursley was thin and blonde and had nearly twice the usual amount of neck, which came in very useful as she spent so much of her time craning over garden fences, spying on the neighbors. The Dursleys had a small son called Dudley and in their opinion there was no finer boy anywhere.

The Dursleys had everything they wanted, but they also had a secret, and their greatest fear was that somebody would discover it. They didn't think they could bear it if anyone found out about the Potters Potter was Mrs Dursley's sister, but they hadn't met for several years; in fact, Mrs Dursley pretended she didn't have a sister, because her sister and her good-for-nothing husband were as unDursleyish as it was possible to be. The Dursleys shuddered to think what the neighbors would say if the Potters arrived in the street. The Dursleys knew that the Potters had a small son, too, but they had never even seen him. This boy was another good reason for keeping the Potters away; they didn't want Dudley mixing with a child like that

When Mr

RECIPIENT:717308235@xx.xx

SENDADDRESS:853474825@xx.xx

CONTENT:

When Mr Dursley woke up on the dull, gray Tuesday our story starts, there was nothing about the cloudy sky outside to suggest that strange and mysterious things would soon be happening all over the country Dursley hummed as he picked out his most boring tie for work, and Mrs Dursley gossiped away happily as she wrestled a screaming Dudley into his high chair

None of them noticed a large, tawny owl flutter past the window

At half past eight, Mr

	A	B	
1	=file("E:/txt/email.txt").cursor()		
2	=create(RECIPIENT,SENDADDRESS,CONTENT)		
3	for A1;_1.split(":")(1)=="RECIPIENT"	=A3._(1)(1).split(":")	
4		=A3._(1)(3).split(":")	
		=B5.m(2:).concat(":")+A3._(1).m(4:).concat()	
		=A2.insert(0,B3(2),B4(2),B6)	
		if A2.len()==500	=file("E:/txt/email_pre.txt").export@at(A2)
			>A2=create(RECIPIENT,SENDADDRESS,CONTENT)
5	=file("E:/txt/email_pre.txt").export@at(A2)		
6	=file("E:/txt/email_pre.txt").cursor@t().fetch@x(10)	/Read in to view the first 10 rows of results	

A6 result:

Each email begins with RECIPIENT. Loop the cursor, When the first part of the message is "RECIPIENT " before " : " , the cursor starts reading until the next time it meets "RECIPIENT". In this way, each loop represents an e-mail, which can be processed in the for loop. When the number of mails reaches 500, the data is exported and the table is emptied.

05

Program Cursor

The stepwise cursor introduced earlier is very convenient, but sometimes it is more complex to calculate at a certain step, and a single function can not complete the calculation. At this time, using the program cursor to return the intermediate results makes it easier to understand and maintain in the future.

Example: Organize the user information and screen out the users in New York State. The user information is as follows:

1	10308583	F	2007-02-07	
2018-03-11	Michigan	10308583_***@mail.xxx		acappella
2	10902344	F	2011-02-17	
2018-02-25	Ohio	10902344_***@mail.xxx		big-beat
3	10550284	F	2010-12-26	
2018-10-23	Illinois	10550284_***@mail.xxx		acappella
4	10719361	M	2003-01-15	
2018-07-01	Missouri	10719361_***@mail.xxx		new age
5	10329553	F	2015-09-21	
2018-08-08	Texas	10329553_***@mail.xxx		ambient
6	10321518	F	2015-11-28	
2018-07-07	Pennsylvania	10321518_***@mail.xxx		trip-hop

User information is divided into two lines. User information needs to be organized into structured data first.

Organize the user information first, then export it to a file, and then use cursor to read and find out the users of New York State.

Program cursor

	A	B
1	=file("E:/txt/user_info.txt").cursor()	
2	for A1,5000*2	=A2.group((#-1)\2)
3		=B2.(~.(~.array()).conj())
4		=B3.new(~(1):ID,~(2):UID,~(3):GENDER,~(4):RDATE,~(5):LDATE,~(6):STATE,~(7):EMAIL,~(8):STYLE)
5		=file("E:/txt/user_info_pre.txt").export@at(B4)
6	=file("E:/txt/user_info_pre.txt").cursor@t()	
7	=A6.select(STATE=="New York")	
8	=A7.fetch()	

Loop the cursor to organize the data into structured data, which is exported in batches and appended to the same file. Create cursor, attach the select operation, and get the final result.

At the end of the last loop, B2-B4 results:

B2

Example: The order table has been sorted by time. It is necessary to remove duplication of data by date and product, and then count the number of records (groupx).

	A	B
1	=now()	
2	=file("E:/txt/PRODUCT_SALE.txt").cursor@t()	/Create cursor
3	=A2.groupx(date(DATE),PID)	/Remove duplication
4	=A3.skip()	/Count the number of records
5	=interval@ms(A1,now())	

A4, A5 results:

Value
9849397

Value
55647

Data is ordered by DATE, otherwise it can't be done like this.

	A	B	C
1	=now()		
2	=file("E:/txt/PRODUCT_SALE.txt").cursor@t()		
3	func	for A3;DATE	=B3.id(PID)
4			return C3
5	=cursor@c(A3,A2)		
6	=A5.skip()		
7	=interval@ms(A1,now())		

A3, A4 results:

Value
9849397

Value
12767

A blue-tinted photograph of a desk with a laptop, a smartphone, and a water bottle. The word "THANKS" is overlaid in white, bold, sans-serif font in the center of the image.

THANKS
